Organization's Social Medias Linked.

- I've used <iframe> to link the map of the organization by customized widths and heights so that map fills to the web page to specify the organization's exact location. Contact Form has been created by <fieldset> tag which takes information from user to inform about a specific product while confirmation code is to check if user is a human or a robot. Organizations E-Mail address has been linked redirecting to Mail application. Social Media for Facebook, Instagram and YouTube is linked so user can explore more about manufacturing process in the facility.

SUMMARY

- I've done this whole webpage with HTML markup tags and CSS is not used so, I've changed the style throughout every web page to ensure that it looks attractive and professional without CSS which is up to the extent that I've learned. Almost every header and footer are the same to make sure that user can access that relevant feature from all pages. I've used Visual Studio Code to type the markup tags rather than Notepad purely because the examiner can easily identify the tags that I've used and to properly manage indentations in tags. I've not used WordPress or Bootstrap themes as thoroughly advised.
